

# MOPACK

## SPECIALIST IN FLEXIBLE FILMS AND PACKAGING SOLUTIONS

We place our focus on providing the **best possible protection** for your products and **presenting** them in an **attractive** and **practical, functional manner**. Combined with the **responsible and conscientious use of resources** and the use of the **most sustainable materials available**. Let us advise you personally on how to pack your products more efficiently, sustainably and effectively.

# MOPACK

was **founded in 1976** by the businessman **Hugo Beck** in Dettingen an der Erms, Germany. Situated 40 km south of Stuttgart in the heart of the **Swabian Alp**, the town is still the headquarters of our company today. As a system supplier of plastic film and packaging solutions, we solve our customers' problems when it comes to packaging requirements in a sustainable manner. We operate **throughout Germany and in neighbouring European countries** with the help of our sales offices and distribution partners.

## Our extensive range of films

and close collaboration with the leading suppliers of film packaging machines allows us to fulfil a wide variety of requirements in an **applied and user-friendly manner**. Our specialisation in **POLYETHYLENE and POLYOLEFIN shrink and shrink-wrap films** has transformed us into one of the most important film suppliers in Europe. In addition to our long-standing and exclusive collaboration with **SEALED AIR** corporation, the respected US manufacturer of POLYOLEFIN shrink films, since the mo-films POLYOLEFIN® brand was established, we also stock the **most extensive range of products** on the market for this type of film. Our diverse range offers solutions for **almost all packaging requirements**.

## The individual advice

given on the phone, by email or on your premises **lies at the heart of every packaging project we undertake**. Here we focus on the adding value for our customers. Although packaging comes at the end of the value chain – it is the first thing the consumer sees. **The best possible protection presented attractively and functionally** – we have succeeded in convincing many household names from a wide range of industries (P&G, Ferrero, Miele, tesa, Head, and many more) with this concept.

## Sustainable packaging

from **resource-saving solutions** represent the present and future of our industry. We addressed this issue at an early stage and have been offering the **world's thinnest POLYOLEFIN fine shrink film in 7µm since 2013**. This patented production technology, based on a mono-material, represents an unrivalled benchmark and enables savings in film of up to 70% to be made. **"Reduce it. Don't remove it"** is our answer to the question of better sustainability. We would be happy to **advise you individually** on how to achieve savings with thinner or recycling-based packaging solutions for your products.

Thank you for your interest and I look forward to working with you as partners.

Thorsten Prygiel  
Managing Director

Do you have questions about our products, delivery times or do you simply need some **detailed advice?**

We will be delighted to help you find the ideal film for your needs.
