

LDeco+50

LDPE films with 50% PCR content

The newly developed packaging films in the **LDeco+50** series have been specifically designed to meet the requirements of a circular economy. They promote the **sustainable and responsible use** of plastics. With a proportion of 50% post-consumer recycled material (PCR) they make a significant contribution to **reducing plastic waste**. Thanks to the versatile production and processing options, these films are **ideal for shrink and bag applications**.

The newly developed packaging films in the **LDeco+50** series have been specifically designed to meet the requirements of a circular economy. Thanks to the versatile production and processing options, these films are ideal for **shrink and bag applications**.

Applications

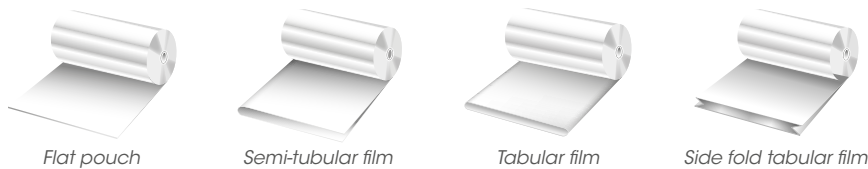

Sales packaging, transport packaging and product protection packaging

Material types

LDPE (Low-Density Polyethylen)

Versions

Possible material properties

Smooth or slip-resistant, mono or biaxial shrinking, UV-resistant, anti-static, electrically conductive, B1 flame-retardant

Dimensions

From 50mm to 2,300mm

Film thickness

From 25µm

Material colouring

naturally cloudy, grayish

Printing

Up to 8 colours (Flexo printing), Inline printing (1-color)

Perforation

Partially or fully perforated

Punching

Punched as a hole or membrane punching in various sizes

Certificates

RecyClass: Traceability and conformity of plastics with recycled content (EN 15343:2007)

Shipping form

On cardboard tube, tube diameter 76mm, plastic core on request

Do you have any questions about products or delivery times, or would you simply like **detailed advice?**

We will gladly assist you in finding the ideal film.
